nearly, if not quite, 35 leagues from the village near El Puertecito. According to Herbert's Map of Sonora, the rectilinear distance between El Puertecito and Arispe is about 65 miles, or 24.1 of the Coronadoan leagues of 2.7 miles each, which, in No. 2 of these Papers, we shall show is applicable to sixteenth-century wilderness journeys in this region. But the Sonora River's general course is remarkably near to due south, between Arispe and El Puertecito, the Sonora River Valley, as a road-site, is very far from being such a straight line as one might imagine. In Part II of his "Final Report", Bandelier tells us that the distance *from the Ojo de Agua del Valle, where the Sonora rises, to Babiácora, in a distance of about one hundred and twenty* **miles**, the traveller has to cross and recross the stream more than a hundred times; and he adds, "The distance in a straight line is only about eighty-five miles." If, as a means of approximate estimate, we apply this ratio of 85:120 to the distance between El Puertecito and Arispe, our 24.1 leagues by air line, becomes 38 leagues by road. This, the friar covered in 7 days, or at a rate of about 4% leagues per day; which, in view of its being up-grade and often quite sandy, is consistent with his rate of 5%, already seen, for the entire distance between the said town-of-taking-possession and Cibola.

The large town from which the 4-days wilderness was to be entered, Bandelier has placed near Bacuachi; but in view of the facts above presented, and the direct contradictory statement by Jaramillo, more particularly noticed in the study of Coronado's Expedition to the Seven Cities of Cibola, *Proven in Early Far West Paper, No. 2*, there remains scarce room for doubt that the identification with Arispe is correct.

In the Rudo Ensayo, Father Mentuig makes the distance from Arispe to the village, "Port of Conception", of 1762, 21 leagues in his geographical account of Sonora River (page 123), and 26 leagues in his itinerary (pages 220-221): a wide discrepancy. While the latter estimate is obviously the more correct, it is probable that the league he used was somewhat longer than the wilderness league of Coronado. If he used the Spanish marine leagues of 3.40 statute miles, 20 leagues to the degree, his 26 leagues, for the distance from Arispe to Port of Conception, becomes 33% of the Coronadoan leagues. That he was at home in Oriental reckoning, appears from his predilection for giving latitudes and longitudes.
The Arispe villagers of 1539 were devotees of fashion; for they were all encacnados; that is, decked out with ear and nose pendants of turquoise, which they called "caconas," and at the head of those who came forth to greet the friar, the village chief and his two brothers were "exceedingly well dressed in cotton fabrics, and ornamented with caconas, and collars or necklaces of turquoise." Nor was Arispe behind the other towns along his route, in the matter of hospitality; for, its inhabitants "supplied their visitor with deer, rabbits, and quail, besides a great abundance of corn and picaninny seed. They also continued to offer him turquoises, skins, fine gourds, and other things which they valued."**

The information which Fray Marcos obtained in Arispe, for the most part served only further to confirm statements already more than once made to him; but he relates the following incident which occurred here in the course of conversation about Cibola:

"And I had on a gown of gray woolen cloth, called paño de Saragosa, that Francisco Vasques de Coronado, governor of New Galicia, had me wear; and the head man of this pueblo and other Indians felt of the garment with their hands and told me that there was much of this in Totonteac, and that the natives from that place wore it for clothing, at which statement I laughed, and said that that could not be, unless it was cotton mantles that they wore. And they said to me, 'Do you imagine that we do not know that this which you wear and that which we wear are different? Know that in Cibola all the houses are full of this goods that we wear; but in Totonteac there are some little animals from which they take that with which is made this that you wear,' I was filled with amazement, for I had not heard of such a thing until reaching here, and I tried to learn very particularly about it, and they told me that the animals are of the size of two Castilian greyhounds that Estevan took with him; they say that
there are many in Totonteac; I could not make out what kind of animals they were."

*Translated from the Spanish of Fray Marcos' Relacion, as quoted on page 140 of Bandelier's Southwestern Historical Contributions.

Upon this passage—of which his translation differs but little from the above—, Bandelier makes the following comments:

"This passage in Fray Marcos's report has aroused considerable speculation. The majority of surmises have been that the people of Totonteac were a sheep or goat herding people. The mountain sheep is not a small animal, and it has no wool; the mountain goat is smaller, and its fleece might correspond to a certain extent to the material described, although the color is lighter. Neither of these
animals was ever domesticated by Indians, nor is there any trace that they were ever hunted for any other purpose than for their meat. Occasionally their hides or flesches have been used, but only now and then, as a matter of caprice or temporary necessity. Of the supposed former existence of a species of Guanacu or Vicuña in North America, other than fossil remains, there is no evidence. It has been overlooked, that, even at the present time, the Moquis of Arizona manufacture blankets out of the fur of the jack-rabbit and of the cony (Lepus callotis and sylvaticus). The fur is cut into narrow strips, which are afterwards wound around a core of yucca fibre so as to form a cord, and out of such cords the blankets are plaited or tressed rather than woven. The garment is extremely warm and quite heavy, and in color as well as in weight it bears tolerable resemblance to the gray Saragossa cloth worn by the monk on that occasion. When Coronado visited New Mexico in the following year, such blankets of rabbit-hair were found among the Moquis (Tusayan), as well as at Zuni-Cibola, although they were most abundant in the former tribe."

Footnote. On the day following that of his arrival at Arispe, the friar left that town—the last one of the Opasas upon his route—and entered the 4-days wilderness, "and [says he] where I had to eat [the midday meal], I found eating-booths and plenty of food, close by a brook (un arroyo), and at night I found houses and in like manner food, and thus I experienced it the four days that the wilderness lasted me."

"Translation (with interpolations) of a passage quoted by Bandelier (op. cit. pp. 138-9) from the original Spanish version of Fray Marcos' Relación.

The fact that he entered this wilderness from Arispe, indicates that he took the left-hand, one of the two roads of which he had the choice for surmounting the divide to the north, and which in part are in the valleys of the two brooks or rivulets at which this town unites to form Sonora River; and that the brook at which the kind natives had prepared food and shelter for his first lodging was either the Bacanuchi or a small branch of the latter in the neighborhood of the place now called Piedra de Lumbre; for, had he turned to the right and ascended the Bacuachi and that fork of the latter that comes from the Punta del Agua, he could not have entered from Arispe into a despoblado (uninhabited stretch) of four days' journey, but would have passed through a series of Indian villages, of which existing in 1541—Castañeda makes mention, and of which, in 1884, Bandelier found remains as far up as Los Fresnos, "ten miles south of the place where the stream rises."

On Herbert's Map of Sonora, three place-names appear along the Bocanuchi route: Piedra de Lumbo, Depachi, and Bocanuchi. Of these, only Bocanuchi is of importance, and is seen on maps of this region as far back, at least, as 1702.

In his "Adventures and Explorations," Captain Michael James Box, who seems to have visited Bocanuchi in 1854, says, "In front of Ariszpe, on the west side of the Sonora river, a small creek of fine water empties itself. Twelve [short] leagues up this creek is situated the hacienda of Barcanuchs, the largest and finest in Sonora. Barcanuchs is an Opata word, which in Spanish is Bonanza, and in English signifies a fortunate place, or a windfall of fortune. This hacienda is the property of Dr. Pancho Perez, of Ures, and boasts a very fruitful soil, abundant water, fine timber, and a beautiful location. Game, also, abounds in its neighborhood, deer and turkey being very plenty. The estate is valued at a hundred thousand dollars."

While his interpretation of the name is quite possibly correct, the necessity of caution in accepting the captain's statements of the meaning of place-names, appears from his telling us (p. 24) that the name of Aconchichi—a town in Sonora Valley, which he spells "Aconchichi"—is "Shell," confusing it with the Spanish word concha; whereas the name Aconchi, or Aconchichi, in its earlier form is of Opata origin and, according to the Jesuit author of the Rudo Ensayo, whose period of long residence in Sonora antedated the explorations of Captain Box by about a century, and who sometimes uses the German spelling, "Akonchi," the name means "on the wall." Senor Pancho bears interpretation.

According to Bandelier (Contr., p. 141), the "sheds" for the friar's night shelter had been built by the Indians at the prompting of Estevan.

At the end of the four days' wilderness journey Fray Marcos "entered a valley well inhabited. Soon afterward he came to a village where he met many people, both men and women, bearing him victuals. The inhabitants were dressed in skins. The women's dressing were "good skirts and chenises.""

See Kino's Tabula California.
over to the head of the San Pedro River and Valley, and to the place
now known as Rancho Cananea, through which passes the Cananea branch
of the El Paso and Southwestern Railway.  

A few miles west of this place is the great Cananea mining district,
brought into special prominence in recent years by Col. William C. Greene,
of the Greene Consolidated Copper Company. According to Kelly’s
Directory of Merchants, for 1911, this district now has a population of
about 18,000.

In this neighborhood, therefore, it was that the despoblado gave
place to settlements, and, "soon afterward," the first village of
the San Pedro Valley was reached.

It would perhaps be natural to suppose that the expression,
"soon afterward," should mean later on the same day; but such an
inference, it appears, would be erroneous, and 4 full days were
doubtless required for the passage of the despoblado. For if we
check up the friar’s days and language, we find that the expression,
"soon afterward," should in fact mean a full day later, and that the
reached in this valley, and where "many people met him ...... bearing
him victuals," was the place now called San Pedro, * a few miles south of the
Sonora-San Pedro divide, or Casas de San Pedro, formerly the Presidio de San Pedro, maintain-
ished for many years as one of the frontier line of forts established to oppose the inroads of the Apaches upon Sonora. (See illustration.)

We have seen that 16 leagues brought Fray Marcos from Matape-Vacapa
to Mata Vaca; that 4 from there brought him to El Puertecito; and 34
thence to Arispe; from which last-named place the four days that
brought him up to the summit of the Sonora-San Pedro divide and down
to the northern end of the despoblado, should probably be reckoned at
about his average rate of 5 1/3 leagues per day, and therefore as amount-
ing to about 21 1/3 leagues. At Rancho Cananea, therefore, where he
entered the settlements, Fray Marcos was 75 leagues from Matape-Vacapa.

We shall later find that, whether, checked forward from Matape-Vacapa
or backward from his entrance into the White Mountain Wilderness, the
most northerly village reached by Fray Marcos on San Pedro River was
in the Turkey Creek-Prospect Creek neighborhood, near the present
place called Pool; and that to reach that village from his first or
most southerly San Pedro River village, he travelled down the San Pedro
River about 30 leagues. Thus, 105 1/3 leagues are accounted for between Matape-Vacapa and the ancient
village near Pool.

But Fray Marcos tells us that he traveled 112 leagues from Vacapa, to
reach that village, 13 leagues to Rancho Cananea, and 70 leagues remains for the dis-
tance from the first settlements (at Rancho Cananea) to the first vil-

lage, which is said to have been reached "soon afterward"; and that village was at or near the present one of San Pedro.

Here, as elsewhere in the San Pedro Valley, Fray Marcos was among the Indians called Sobalpiris, a division of the High Pimas, closely related to the Papagos."

"Until 1762, when pressure from the Apaches constrained them to join the Papagos of Santa Maria Suanca, San Xavier del Baco, and Tucson, the Sobalpiris seem to have occupied the San Pedro River Valley from time immemorial. The Rudo Ensayo (qui, transl., p. 189) has, "the river San Pedro, called also Sobalpiris." For a note upon these Indians and the locations of their villages not mentioned in this connection, see Early Far West Paper, No. 2.

The aboriginal name of this place, I have not been able to determine. In maps and literature that I have been able to consult, I find the names of but three early villages on the San Pedro drainage, south of Babocomori Creek, Terrenate, Jaibanipitca, and Huachucha. Of these, Terrenate was considerably to the west of Fray Marcos' northward and main line of travel (although it is not unlikely that he passed through it on a side-trip which we shall presently notice); and Jaibanipitca was too far north; so that neither of these can be identified with the village which the friar found near the one now called San Pedro." Huachucha remains as a doubtful possibility.

Terrenate, mentioned in Spanish annals as early as 1697, and probably earlier, was well up on Terrenate Creek. From 1742 until perhaps some time later in the same century (Presidio de Terrenate) was maintained here, furnishing a degree of protection to missions, mining camps, haciendas, rancherias, etc., in the upper valleys of the rivers Santa Cruz, San Pedro, and Sonora. Its garrison service seems to have been very active, at times, least, to have been shared with Guayavi, on Rio Santa Cruz, as in 1758, when the expense of the military establishment of "San Felice de Jesus Guayavi y Torrenate" was estimated at $20,665 per year, or even to have been quite removed to Guayavi temporarily, as in 1744, when "San Felice de Jesus Guayavi" is mentioned as having a garrison of 50 men. At least as early as 1741-42, there is mention of a mining camp, called "San Bernardo Gracea Real." (See Bogos Ensayo, pp. 253, etc., and Bancroft XV, pp. 625, etc.) Jaibanipitca is said to have been, in 1697 on the cruise of De Bucuri; King's map shows it as the latter north and "Santa Cruz" (El Cuervo, which is Jaibanipitca) south of Babocomori Creek. (See Bancroft, XVII, 347.)

whether converge roads from Frontonas, Rancho Canahua, and San Pedro, into one leading west to Rio Santa Cruz.

Padre Mentuig informs us that Huachucha (which name he spells "Guchua"), "near Terrenate," was a "Pima" town, whose abandonment dates from some time in the period of his eleven years residence in Sonora (1751-62). He in this instance, as often, refers to the Sobalpiris by their generic name, "Pimas." There can be no doubt that Huachucha was a Sobalpiris town; but whether it was on the San
