century maps, ranging from Sebastian Cabot's New World map of 1544 to Wytfliet's New Granada and California of 1597, and one seventeenth century map of the world by Matthias Quadus (1606), in which the Sea of Cortés, — nameless or under its alternative names of "Mar Vermeio" (Red Sea) and "Californiae Sinus" (Gulf of California), — is shown as a gulf, and the land on the west of it as a peninsula. And of similar import is Lok's map (1582), reproduced in Volume XV of Bancroft's Works (page 151); the peninsula bearing the name "S. Croce" opposite the fundus of a bay well southward on its eastern coast, and having a cape named "C. Californio" at its southern end.

But in many later maps, as the Dutch map of 1624—5 cited by Bancroft (XV, 169) from Purchas, and those of Fredericus de Witt (1662), Peter van der Aa (1690), William Dampier (1699), John Harris (1705), Herman Muller (1708), the original error of 1533—8, of making California an island, an error which had its origin in a search for islands of the Asiatic Indies northwest of Mexico, was revived and perpetuated. The revival of this error was largely—perhaps primarily—due to a geographical misunderstanding on the part of Ortelius's expedition, in 1595:

In 1604—5, Juan de Anza led an expedition of thirty men from San Juan de los Caballeros, New Mexico, by way of the Zuñi and Mogu towns, the upper Rio Verde country, and Bill Williams Fork, to the Colorado River which he descended. Says Bancroft (XVII, 156): "Ortelius reached the water on January 23, 1605, and on the 25th, with the friars and nine men, went down to the mouth. Here he found a fine harbor, formed by an island in the center, in which he thought 1,000 ships might ride at anchor. That the sea extended indefinitely northwestward behind a range of hills, the Spaniards believed on the authority of the Indians."

But its effective rehabilitation and perpetuation was the work of the Dutch, who were the leading map-makers of the seventeenth century.

During the 17th century very considerable progress was made in the art of navigation, and in systematizing and delineating the vast mass of material which was accumulated by the ceaseless activity of explorers. The Dutch took the lead as map-makers. (Encyc. Brit., Ninth ed., Vol. VII, article "Geography.")

Though rejected by most French geographers, so prevalent did this error become, that even Father Juan Maria

...Reductions of four maps: Purchas, de Witt, D'Anville, and Dampier, shewing the coast of California opposite the

...Late catalogue (No. 445) of the Museum Book Store, London, lists "A new and most exact Map of America, described by N. Visscher and done into English, enlarged and corrected according to J. Blaeu, and others, with the habits of ye people and ye manner of ye Chief. Bitties, ye like never before. ... London, printed and are to be sold by John Overton, at ye White Horse in Little Britaine near the Hospital 1643," which shows the "Land of California," and says, "This California was in times past thought to be a part of ye Continent and so made in all maps, but by further discoveries was found to be an Island long 1,000 Leagues." "The J. Blaeu is probably for J. Blaeu, publisher of the grand atlas of cosmographiae Blaviana, containing de L'Amérique," F. W. J. Blaeuwe and Jan Blaeuwe, Amsterdam 1647. (See Phillips' "List of Maps of America," p. 561.)
Salvatierra*, the famous Jesuit apostle of California, who had
*For a brief biography of Salvatierra, see footnote on page 278 of Volume XV of Bancroft's Works. For a history of his work in Lower California, see succeeding pages of the same volume.

founded the mission of Loreto on that peninsula in 1697, and dwelt there, supposed for several years that he was living on an island, and only in 1701, by hearing of the then recent observations of his still more noted contemporary, Padre Eusebio Francisco Kino (Eusebius Kühn)*, and later by accompanying that father on a northward expedi-

tion, did he become convinced that the land then known as California was a peninsula.

Even after the appearance of Kino's map, the "Tabula Californica," in 1702, many were still not convinced; Salvatierra himself was anxious, some years later, to join an exploratory expedition to further confirm his somewhat halting opinion; and expeditions by Ugarte in 1721 and by Consag in 1746 were necessary before the people of northwestern Mexico and geographers abroad were fully convinced, and the California Island myth was forever exploded.*

*In a letter of March 20, 1747, Father Sedelmayr, a Jesuit missionary of Tubutama, northern Sonora, wrote that Father Consag's voyage of the preceding year was "deemed conclusive as to the peninsular character of California, lately called in question by reason of Campos' theories." (Bancroft XV, 539.)

Returning now to the route of Coronado from Culiacan to Cibola, a few words may first be said as to the leading authorities concerning it.

While the pioneer essay of 1869 by James Hervey Simpson*, was a

useful contribution, and the arduous and fruitful researches of the '80s by Adolph Francis (Alphonse) Bandelier* at length blazed the way

*Published in Papers of the Archaeological Institute of America, American Series, Vols. I-V, 1883-1892; and in "The Gilded Man," New York, 1893; and elsewhere.

to a correct knowledge of Coronado's route; and while the documents, translations and studies presented by George Parker Winship in the
volume already cited, will long remain the greatest repository of information concerning the expedition as a whole; — Frederick Webb Hodge's critique, entitled "Coronado's March to Quivira," occupying forty-five closely printed quarto pages of Volume II (Harahay) of Brower's Memoirs, published in 1899, — is for the study that has yet appeared of the route of that remarkable expedition.

We should not, however, forget that in 1848, preceding all of these, Ephraim G. Squier published an account of Coronado's explorations, in Volume VIII of the American Review; and, in the same year, to accompany Albert Gallatin's Introduction to Hale's "Indians of Northwest America," prepared a map, which was published in that year in Volume II of the Transactions of the American Ethnological Society, and which not only identified Cibola (correctly, as we shall see) with present Zuñi-land, but about as far east as any representation of the Gila River to indicate the very direction of the more recent states of the title. The latest results of modern research have claimed for it. We shall cite all of these writers more particularly farther on in this chapter.

Coronado's route from Culiacan to Cibola, as traced by Mr. Hodge in Brower's "Harahay," but with some doubtful details here omitted, was substantially as follows:

From Culiacan it led northwesterly to Sinaloa; thence north to Fuerte; thence northwesterly to Alamos; thence to the Yaqui River in the vicinity of Buena Vista or Cumuripa; thence across the upper part of the Rio Matape, in the vicinity of Matape, to the

This Estudio is an ancient Sudeva village on Rio Matape, below the Sudeva Village of Matape and not far from Naciri; it should not be confounded with the Opata village of the same name on Rio (Oposura) Moctezuma.

The village which Catesco de Vaca, in 1532, had named el Fuerte, lies in a fertile valley and settlement of the
Christians never kill women, and he killed them, and because he assaulted their women, whom the Indians love better than themselves. Therefore they determined to kill him, but they did not do it in the way that was reported, because they did not kill any of the others who came with him, nor did they kill the lad from the province of Petatlan, who was with him, but they took him and kept him in safe custody until now.* When I tried to secure him, they made excuses for not giving him to me, for two or three days, saying that he was dead, and at other times that the Indians of Acucu had taken him away. But when I finally told them that I should be very angry if they did not give him to me, they gave him to me. He is an interpreter; for although he can not talk much, he understands very well. Some gold and silver has been found in this place, which those who know about minerals say is not bad. I have not yet been able to learn from these people where they got it. I perceive that they refuse to tell me the truth in everything, because they think that I shall have to depart from here in a short time, as I have said. But I trust in God that they will not be able to avoid answering much longer. I beg Your Lordship to make a report of the success of this expedition to His Majesty, because there is nothing more than what I have already said. I shall not do so until it shall please God to grant that we find what we desire. Our Lord God protect and keep your most illustrious Lordship. From the province of Cibola, and this city of Granada, the 3d of August, 1540. Francisco Vasques de Coronado kisses the hand of your most illustrious Lordship."

The portions of Coronado's letter that are quoted above, in relation to what transpired in Cibola after the occupation of Hawiku, and concerning Cibola and surrounding provinces, are from Winslow's translation of it in the Fourteenth Annual Report of the Bureau of Ethnology, and especially from pages 558-563 of the latter.

With the above extracts and discussions of Coronado's Letter to Mendoza, we close our study of Coronado's Expedition to the Seven Cities of Cibola. The branch expeditions to Tusayan, to the Grand Canyon and other parts of the Colorado River, to Acosa and Tuhahaco, to Tiguex, Sicuye, Taos, and other parts of the Rio Grande and Rio Pecos valleys; the army's operations in the valley known soon afterward as New Mexico and destined to be the heart of the present great state of that name; and the famous March into Texas, Oklahoma, and Kansas, known as Coronado's Expedition to Quivira; — all of these, belong to other.
"Desert of Chichiltic Calli," i.e., the White Mountain region, in which by way of Gila Bonito Creek, calling it "San Juan" because they reached it on St. John's day; Salt River, calling it "Río de las Bañadas" because they had to cross it by means of rafts; and to the source of the Little Colorado River, their "Río Frio," or Gold River; and from the Little Colorado to a stream which they called "Río Bermejo," which was the Zuñi River, reached some 15 miles below the present New Mexico-Arizona line; and up this river to the Zuñi pueblo of Hawikuh, which became Coronado's headquarters and was given the Spanish name of "Granada."

Hawikuh, as Bandelier and Hodge have shown, was the most southerly of the Zuñi pueblos, or "Seven Cities of Cibola;" it was farther to the southwest than any of the Zuñi pueblos of today, being near the Ojo Caliente, where its ruins may still be seen.

The identity of the province of Cibola with what is now generally known as "the Zuñi country," has been thoroughly established. While Messrs. Gallatin and Squier, in their above-cited studies of 1848, were, I believe, the first of modern writers to identify the province with that of Zuñi, a definite statement of such identity was made about three centuries ago by Espejo, in the report of his expedition of 1583. (N. Bandelier 1889) in his "Historical Introduction to Studies among the Sedentary Indians of New Mexico", page 16, "The original text of Espejo's report distinctly says, '...a province of six pueblos, called Zuñi, and by another name Cibola,' thus positively identifying the place."

In his "Coronado's March" (1899), Hodge has a discussion of the identity of Zuñi with Cibola, from which (pages 45 and 46) we here quote: "By Castañeda it is recorded that 'after the army reached Cibola, on the return to Mexico,' it rested before starting across the wilderness, because this was the last settlement in that country. The whole country was left well disposed and at peace, and several of our Indian allies remained there' (page 536). 'The natives of Cibola' kept following the rear of the army for two or three days, to pick up any baggage or servants, for although they were still at peace and had always been loyal friends, when they saw that we were going to leave the country entirely, they were glad to get some of our people in their power, although I do not think they wanted to injure them, from what I was told by some who were not willing to go back with them when they teased and asked them to. Altogether they carried off several people, besides those who had remained of their own accord, among whom good interpreters could be found to-day' (page 537).

"In other words, Castañeda, while preparing his narrative twenty years after the expedition, noted the presence still at Cibola of a number of Mexican Indians left there by Coronado — a fact which again became
known forty years later, when Antonio de Espejo, during an expedition in 1583 to a province which, he says, "they call Zuni, and by another name, Cibola," found "crosses placed near the pueblos, and three

"Documentos Ineditos de Indias, XV., 180: 'Que la provincia llaman Zuni, y por otro nombre Cibola.' The relation of Espejo appears twice in this volume; in the other copy (p.117) Zuni (frequently spelled 'Cuni' in the sixteenth century documents) becomes 'Ame'. The misprint is obvious." Footnote by Hodge.

Christian Indians called Andrés de Cuyacán, Gaspar of Mexico, and Anton of Guadalajara, who said that they had come with the said Governor, Francisco Vasquez [Coronado].

"Espejo's account of his startling discovery at Zuni is confirmed by a statement made in a Discurso de las jornadas' (misdated 1526) bearing on the expedition of Juan de Oñate in 1597-1598, when he visited the province of 'Juní', there finding 'crosses of former days, to which the Indians paid devotion, and offered to them their idols; here were found children of the Mexican Indians who were left by Coronado'.

"3 Documentos de Indias, XVI., pp. 273-274." Footnote by Hodge.

That the identity of Zuni with Cibola was still recognized in the eighteenth century, is indicated by the following from Simpson's essay of 1869:

"I have seen in the excellent library of the Peabody Institute of Baltimore an atlas entitled 'The American Atlas, or a Geographical Description of the Whole Continent of America, by Mr. Thomas Jeffreys, Geographer, published in London in 1773.' On map No. 5 of this atlas, Zuni and Cibola are laid down as synonymous names, and the locality they express is precisely that of Zuni of the present day. Again, on a 'Carte contenant le Royaume du Mexique et La Floride,' in the 'Atlas Historique par Mr. C * * * avec des dissertations sur l' Histoire de chaque etat par Mr. Guendeville,' tome vi, second edition, published in Amsterdam, 1732, I find Zuni and Cibola laid down as synonymous.

But for many years, until quite recent, all of these early identifications seem to have been lost sight of, and the earlier of the modern writers who have recognized that these two names are synonyms, have reached their conclusion from considerations mainly geographical.

As regards the origin of the name, Cibola, Bandelier says, "I am convinced, from what Mr. Cushing has told me, that the origin of Cibola is "Shi-u-uo-na," the name of the range claimed by the whole Zuni tribe, ancient and modern; and he adds, "the name Shi-u-uo-na is sometimes applied to the whole tribe."
We will now notice some of the views that have been held by other modern writers than Hodge, concerning Coronado's route from Culiacan to Cibola.

While Gallatin and Squier, as we have seen, both identified the province of Cibola with that of Zuñi in 1848, the former seems to have paid scant attention to the route of Coronado thither, and none whatever to Chichilticalli, so far as concerns locating these according to recent geography; but the latter, in Volume VIII of the American Review, page 521, locates Chichilticalli on Gila River,* and on his Map of the Valleys of the

*In an article entitled, "New Mexico and California," or "The Ancient Monuments, and the Aboriginal Semi-civilized Nations of New Mexico and California; with an Abstract of the Early Spanish Explorations and Conquests in those Regions, particularly those falling within the Territory of the United States;" American Review for November, 1848, pp. 503-528.

Rio Grande and Rio Gila, (1848,) in Volume II of the Transactions of the American Ethnological Society, he traces a location of Coronado's route from the Sonora River to "Zuny or Cibola," which, in its broader features, is a remarkable approach to those worked out with the fullest
